

PDF HELPER V1.01

NOTE:

- (1) This software is released as “as-is”, No official technical support provided.
- (2) This document has 2 pages.

System Requirements:

Windows XP SP2

.NET 2.0 Framework

5 GB free space in C: drive

How to Run:

Just run PdfHelper.exe directly

PdfHelper will create c:\temp\pdfhelper as working folder if it's not there

How to Merge PDFs:

1. Clean c:\temp\pdfhelper\input folder first
2. Put **2 or more** PDF files in c:\temp\pdfhelper\input folder
3. Launch PdfHelper.exe
4. Click Start
5. Merged result will be in c:\temp\pdfhelper\output
6. The merge sequence is based on input files' name sequence

How to Split PDF without control file (page by page splitting):

1. Clean c:\temp\pdfhelper\input folder first
2. Put **just one** PDF file in c:\temp\pdfhelper\input folder
3. Launch PdfHelper.exe
4. Click Start
5. Each page will be a new PDF file in c:\temp\pdfhelper\output

How to Split PDF with control file (data driven splitting):

1. Clean c:\temp\pdfhelper\input folder first
2. Put **just one** PDF file and **control.txt** (control file name has to be control.txt) in c:\temp\pdfhelper\input folder
3. Launch PdfHelper.exe
4. Click Start
5. The results will be in c:\temp\pdfhelper\output
(see page 2)

Control file format (control file name has to be control.txt):

- control.txt has to be **pure text file** composed by **notepad.exe or similar programs**
- control.txt has to be line by line **without any white spaces on top or bottom.**

A sample control file looks like this (see the sample control.txt in the zip package):

```
9,test1
21-200,test2
401-600,test3
```

“9,test1” means splitting 9th page of the original PDF file into test1.pdf

“21-200,test2” means splitting page 21 to page 200 of the original PDF file into test2.pdf

“401-600,test3” means splitting page 401 to page 600 of the original PDF file into test3.pdf

In the above example, the program will run through 3 lines and create 3 PDF files in the output folder.
